

**Learning Objective**

To explore and practise the technique of one-point perspective.

**Key Words**

Perspective  
Vanishing point  
Horizontal  
Vertical

**● Step 1 - Knowledge & Comprehension**

Use the internet to find out about one-point perspective. Find and choose an image that you think is a good example of one-point perspective.

**● Step 2 - Application**

Draw the image that you found in step one.

**● Step 3 - Analysis**

Look for a real life example of one-point perspective. This could be outdoors or indoors. Think about where the vanishing point is. Look for the parallel vertical and horizontal lines. Examine how the size of objects changes when they are further away from you.

**● Step 4 - Synthesis**

Draw a picture of the scene that you looked at in step 3. It does not need to be coloured in.

**● Extension Task - Evaluation**

How do you think you did on these tasks? What parts were the most difficult? What would you improve if you were to do it again?
